

Methodology: Target Company Research

Objective

To identify 25 Indian specialty manufacturing companies (₹50Cr–₹500Cr) aligned with DeepThought's Federer ICP using structured filtering and evidence-based scoring.

Data Collection

Companies were sourced using:

- Google search (industry + city keywords)
- LinkedIn company/founder search
- IndiaMART and business directories
- Industry expos and association listings
- MCA registry (for validation)

Initial pool: ~75–100 companies

Filtering Criteria

Companies were shortlisted based on:

- Must be a manufacturer (not trader/distributor/service provider)
- India-based operations
- Revenue range: ₹50Cr–₹500Cr (estimated)
- Specialty / differentiated product focus
- Technical or engineering-led leadership

Final shortlist: 25 companies

Evaluation Framework (C1–C6)

Each company was scored on:

- C1: Manufacturing capability
- C2: India presence
- C3: Differentiation / IP / technical depth
- C4: Technical decision-maker
- C5: Industry growth potential
- C6: Active growth signals (hiring, expansion, certifications, news)

Scores were categorized as Weak / Moderate / Strong with supporting evidence.

Final Classification

Companies were classified as:

- Strong Fit (80–100)
- Fit (60–79)
- Borderline (40–59)
- Reject (<40)

Only Strong Fit and selected Fit companies were included.

Output Format

Final output delivered as a structured CSV containing:

- Company details
 - Segment and revenue band
 - Decision-maker
 - C1–C6 scores
 - Final verdict
 - Personalization hook
-

Tools Used

- Google Search
 - LinkedIn
 - IndiaMART
 - MCA data references
 - Manual analysis
 - AI assistance for structuring (not raw generation)
-

Summary

A structured, evidence-driven research process was used to filter and evaluate companies based on manufacturing strength, technical leadership, and growth signals to ensure alignment with ICP requirements.
